                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     á
                                                                                                                                      Sequence 8096, Application US/09328352

Patent No. 6562258

Patent No. 6562258

GENERAL IMPORMATION:
APPLICANT: Gary L. Beton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION UNMERE: US/09/328,352

CURRENT APPLICATION UNMERE: US/09/328,352

CURRENT FILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252

SEQ ID NO 8096

LENGTH: 587

TYPE: PRT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

A;Reference name of compared with conceptual translation
A;Accession: S26399
A;Status: not compared with conceptual translation
A;Molecule type: DNA
A;Molecule type: DNA
A;Residues: 1-703 <SCH>
A;Residues: 1-703 <SCH>
A;Residues: 30-52 <SC2>
C;Function:
C;Function:
A;Description: catalyzes the breaking and reformation of 1,4-alpha-D-glucopyranosyl bonds
A;Note: can also catalyze the disproportionation transfer of 6 to 8 1,4-alpha-D-glucopyra
C;Superfamily: cyclomaltodextrin glucanotransferase; alpha-amylase core homology
C;Keywords: calcium; duplication; extracellular protein; glycosyltransferase; hexosyltran
F;1-29/Domain: signal sequence #status predicted <SIG>
